IDENTIFIERS San Francisco Bay; San Francisco Unified School District CA

ABSTRACT

The Institute for Research on Educational Finance and Governance (IFG) has designed and implemented a major survey of public and private schools in the six-county San Francisco Bay Area which focuses on organizational dimensions in elementary and secondary schools. Private schools include Catholic parochial and Catholic private schools, independent schools, and schools of different religious affiliations. A survey of principals and teachers in the sample schools was also conducted to determine similarities and differences among personnel in the public and private sector. The sampling was extensive: school questionnaires were sent to each of 563 public and 374 private schools; personnel questionnaires were sent to principals in all schools sampled; and teacher questionnaires were sent to a stratified sample of schools employing approximately 2,471 public and 2,688 private school teachers. The overall return rates ranged from about 20-35% depending on the sample. This report contains the documentation for the IFG public and private school and school personnel databases gathered as part of the "Comparative Study of Public and Private schools in the San Francisco Bay Area." This report provides more detailed information on the variables contained in the databases and return rates. The unit of observation of the school database is the individual school, and that of the personnel database is the individual teacher or principal. (Author/TE)

DOCUMENTATION FOR THE IFG

PUBLIC AND PRIVATE SCHOOL DATABASE

Prepared by

William Blanford

and

Jay G. Chambers

1985

William Blanford is a graduate student in the School of Education at Stanford University.

Jay G. Chambers is a Senior Research Economist at the Institute for Research on Educational Finance and Governance, Stanford University.

The database for which this documentation was prepared was developed under a grant from the National Institute of Education (Grant No. NIE-G-83-0003).

EA 018 523

INSTITUTE FOR RESEARCH ON EDUCATIONAL
FINANCE AND GOVERNANCE

The Institute for Research on Educational Finance and Governance is a Research and Development Center of the National Institute of Education (NIE) and is authorized and funded under authority of Section 405 of the General Education Provisions Act as amended by Section 403 of the Education Amendment of 1976 (P.L. 94-482). The Institute is administered through the School of Education at Stanford University and is located in the Center for Educational Research at Stanford (CERAS).

The research activity of the Institute is divided into the following program areas: Finance and Economics; Politics; Law; and Organizations. In addition, there are a number of other projects and programs in the finance and governance area that are sponsored by private foundations and government agencies which are outside of the special R&D Center relationship with NIE.

ABSTRACT

IFG designed and implemented a major survey of public and private schools in the six county San Francisco Bay Area which focuses on organizational dimensions in elementary and secondary schools. Private schools in this study include Catholic parochial, Catholic private schools, independent schools and schools of different religious affiliations. Furthermore, a survey of principals and teachers in the sample schools was conducted to determine similarities and differences among personnel in the public and private sector. The sampling was extensive: school questionnaires were sent to each of 563 public and 374 private schools; personnel questionnaires were sent to principals in all schools sampled; and teacher questionnaires were sent to a stratified sample of schools employing approximately 2471 public and 2688 private school teachers. However, the overall return rates ranged from about 20-35% depending on the sample.

This report contains the documentation for the IFG public and private school and school personnel databases gathered as part of the "COMPARATIVE STUDY OF PUBLIC AND PRIVATE SCHOOLS IN THE SAN FRANCISCO BAY AREA." Those interested in these databases should consult the DESCRIPTIVE REPORT (IFG Project Report no. 84-A17) on the comparative public and private school study. This report provides more detailed information on the variables contained in the databases and return rates and is suggestive of the ways in which these data might further be analyzed.

INTRODUCTION

This report contains detailed documentation for the personnel and school databases developed as part of the "COMPARATIVE STUDY OF PUBLIC AND PRIVATE SCHOOLS IN THE SAN FRANCISCO BAY AREA." This study was initiated at the IFG in the Winter of 1981 by a group of social scientists interested in studying the various dimensions of decision making and resource allocation in public and private schools. The purpose of the study was to identify differences between and among public and private schools related to organizational characteristics and patterns of resource allocation in order to increase our understanding of the sources of differences. This study by design did not include any data on educational outcomes and was in no way designed to determine which kinds of schools "do better." Issues related to assessing school effectiveness were simply beyond the scope of this study. The principal researchers working on the study were more concerned with simply trying to understand the sources of differences in schools. We recognized that the objectives and goals of public and private schools were likely to be significantly different and that the differences would make comparisons of school effectiveness relatively meaningless. It was our view that simply trying to understand the nature of the diversity and choice in the public and private sectors and the sources of the differences in these schools was a sufficiently worthy goal and difficult undertaking.

There were two databases developed out of this study: a school database and a personnel database. The surveys included public and private schools in the six county greater San Francisco Bay Area in California. The six counties included in the survey were Alameda, Contra Costa, Marin, San Francisco, San Mateo, and Santa Clara. The school database contains a sampling of about half of the public schools stratified by type of school and size of district (measured by the number of elementary schools within the district). In addition, the school database also includes all of the private schools with greater than 50 students in the six county area. Responses were received from Catholic parochial and private schools, other religious schools and non-sectarian schools. Detailed breakdowns of variable values and survey response rates may be found in IFG Project Report No. 84-A17 entitled "A COMPARATIVE STUDY OF PUBLIC AND PRIVATE SCHOOLS IN THE SAN FRANCISCO BAY AREA: A DESCRIPTIVE REPORT."

THE SCHOOL DATABASE

Survey questionnaires were administered to all of the schools in the samples described above. Three different types of school questionnaires were administered to Catholic, other private and public schools. The reason for this was that we were able to obtain certain items of data from alternative sources for these different classes of schools. Although we would have preferred to administer a single questionnaire, we found it necessary to design three separate questionnaires in order to reduce the burdens of data collection as much as possible. This was necessary to gain the cooperation of certain representatives of the school sectors who had been asked to assist us in our data collection effort.

All of the schools included in our original sample are included in the school database whether or not a survey questionnaire was returned. The reason for this was that we were able to obtain at least some minimal information from the alternative sources (e.g., the California State Department of Education and the local Catholic Dioceses) on all of the schools in the sample. Variables are included in the database to indicate whether the school returned a survey or not.

PERSONNEL DATABASE

The second database is based on samples of public and private school personnel. One questionnaires was designed for each of four groups of school personnel: public school teachers, private school teachers, public school principals,and private school principals/heads, respectively. The two teacher questionnaires were almost identical except for minor differences in phrasing in some specific questions. This was also true of the two principal questionnaires.

A cluster sampling technique was used to select teachers. Teacher samples were drawn from a subset of the public and private schools included in the school surveys. All of the teachers within selected schools were sent teacher questionnaires. Approximately 2,700 teachers were surveyed in each sector for a total of 5,400.

In addition each principal or school head of a school included in our school sample was sent a principal survey questionnaire.

Our personnel database contains about 1,000 teachers and 280 principals.

MATCHING THESE DATABASES

Neither schools nor individuals responding to our survey are identified by name. The code numbers that have been assigned to them are sequential and are in no way related to identifying code numbers assigned by any public or nonpublic agency for identification. However, in assigning the school identification numbers (SCH_ID) on each database, we did take care to assign the sample school code on both the school and personnel observations. If a user decided to match school level information to a particular individual, this would be possible by merging the personnel and school databases according to the variable SCH_ID.

FOR FURTHER INFORMATION

The user interested in more detailed information about the items of data included in the school and personnel databases referred to above should obtain the companion report entitled "A Comparative Study of Public and Private Schools in the San Francisco Bay Area: A Descriptive Report," Project Report No. 84-A17 from the Institute for Research on Educational Finance and Governance at Stanford University. The Descriptive Report contains detailed information on the study design and purposes, the sampling, the survey questionnaires, and the various data sources. In addition, it provides detailed breakdowns of a wide variety of the variables to illustrate the formats in which these data are recorded.

ORGANIZATION OF THIS DOCUMENTATION

The file layout and variable formats are presented on the following pages for each database. The school database is presented first on pages 1 to 191. The personnel database follows the school database and the page numbering begins again and runs from page 1 to 56. Two indexes of variables are presented at the front of each database. One index lists the variables in the sequence in which they appear on the computer file. A second index lists the variables in alphabetic order by mnemonic. In each case, the sequence number (denoted S #) of the variable and the page number (denoted P) where format information may be located is indicated next to the variable mnemonic.

As should be apparent by now, the unit of observation of the school database is the individual school, and the unit of observation of the personnel database is the individual teacher or principal.
